Subject:	RE: ACCORD question

Dear Diane,

I have been out of the office. The mg FTC tar for the conventional cigarettes are:

Marlboro Lights (10.8 mg tar)
Merit Ultima (1.0 mg tar)
Accord JLI (3.9 mg tar)

How is going? Please let me know if you need any additional information.

Best regards,
Bettie

Subject:	ACCORD question

Dear Bettie

I have a question about the FTC for ACCORD. I noticed that this seems to be the FTC level for Marlboro lights (which is what the subjects were smoking prior to the study). It would be helpful for us to know what the FTC level is for each of the treatment groups?

thanks
Diane

Dear Diane,

The ID numbers that you listed (17,31,33,54,61 and 65) were dropped due to their failure to meet the study eligibility criteria at some point in the study and so that is why there are no data at those points.

The subjects with data for screening and enrollment only were dropped due to positive drug screens and should be deleted.

To clarify a point, the number of cigarettes at screening and enrollment are the mean number of cigarettes smoked during the past 3 months. The number of cigarettes at the visits are the mean number of cigarettes smoked within the 3 days prior to the visit.

Please don't hesitate to request additional information. If this is not the best format for easy use for the simulation please let me know how you prefer the data.

Best regards,

Bettie

Subject: FW: PM TES file
Importance: High

Dear Bettie

my programmer has a few questions about the TES data file:

The following ID's (17,31,33,54,61 and 65) had one or more visits with no NUMCIGS. Can you find out what these values were? if not, should we just use the last NUMCIGS value and carry it forward?

For several patients, there is just the SCR and ENR Visit information and nothing further. Can we conclude that these were dropouts?

thank you
Diane
